SUPPLEMENTARY INFORMATION:

1. Authority

Part B of Title III of the Energy Policy and Conservation Act (EPCA), (Pub. L. 94-163) created the Energy Conservation Program for Consumer Products other than Automobiles (Program). The products currently subject to this Program include fluorescent lamp ballasts among others. EPCA sets minimum energy conservation standards for fluorescent lamp ballasts and requires the Department of Energy to revise and increase these standards.

2. Background

On March 4, 1994, the Department proposed standards for room air conditioners, water heaters, direct heating equipment, mobile home furnaces, kitchen ranges and ovens, pool heaters, fluorescent lamp ballasts and television sets. (59 FR 10464). The Department received over 8,000 comments on the proposed rule, including comments from manufacturers, consumers, Members of Congress, retailers, broadcasters, national trade associations, national energy advocates, utilities and other Federal agencies. Based on the comments in the record, the Department determined that revised data from a larger sample of fluorescent lamp ballast types was needed. On December 2, 1994 and on January 17, 1995, the Department held public meetings at the Lawrence Berkeley Laboratory (LBL) in Berkeley, California. The purpose of the meeting was to review the methodology for the fluorescent lamp ballast engineering analysis and to discuss the need for current data on all types of fluorescent lamp ballasts. On January 31, 1995, the Department published notification in the Federal Register of the Department decision to proceed with separate rulemakings for fluorescent lamp ballasts, televisions, and electric water heaters. (60 FR 5880).

3. Discussion

The purpose of the workshop is to discuss the engineering analysis, data sources, the maximum technologically feasible design, and the life-cycle cost analysis for fluorescent lamp ballasts. This workshop will not involve discussion of energy conservation standards for ballasts.

Discussion of the engineering analysis will focus on ballast classes, energy use data (watts input), ballast efficacy factors (BEF), and cost versus ballast efficiency. Ballast classes under discussion will be the one to four lamp F40T12 and F32T8 ballasts, the two
